PROFESSIONAL SUMMARY

AI Software Engineer with 3 years of backend and full-stack experience and 9 months of hands-on Data Science training. Builds end-to-end AI applications: models served through FastAPI and Laravel REST APIs, with React front ends. Experienced in Generative AI (LLMs, RAG, vector databases), Computer Vision (YOLO, OpenCV, OCR), Deep Learning and NLP, using Python, SQL, TensorFlow and Scikit-learn.

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, SQL
Generative AI: LLMs, RAG, Prompt Engineering, Chatbot Development, ChromaDB, Vector Embeddings, Ollama, Sentence Transformers
ML & Deep Learning: Scikit-learn, TensorFlow, Keras, CNN, NLP, MediaPipe, Transfer Learning (VGG16)
Computer Vision: OpenCV, YOLO, EasyOCR, Face Recognition
Frameworks: FastAPI, Laravel, React.js, Node.js
Data & Visualization: NumPy, Pandas, Matplotlib, Power BI
Databases: MySQL, PostgreSQL
Tools & Deployment: Git, Jupyter, Google Colab, VS Code, AWS, REST API Development

PROJECTS

AI Resume Analyzer (React.js, Laravel, FastAPI, RAG, Ollama)
- Built an AI-powered tool that evaluates resumes against job descriptions using LLMs and Retrieval-Augmented Generation (RAG).
- Extracted resume content with PDFPlumber, generated semantic embeddings with Sentence Transformers, and performed semantic matching using ChromaDB.
- Integrated Ollama (Llama 3) to produce AI-based match scores, identify missing skills, and give personalized improvement recommendations.

Number Plate Recognition System (YOLOv8, EasyOCR, OpenCV, Laravel, React.js)
- Built a real-time number plate recognition system using YOLOv8 and EasyOCR to read plates from a live webcam feed.
- Integrated with a Laravel REST API to look up vehicle owner details and display results in a React dashboard.
- Added plate-format validation and repeated-read confirmation to reduce false OCR reads.

AI-Powered Face Recognition Attendance System (Python, OpenCV, face_recognition, Laravel)
- Developed a real-time attendance system with face detection, encoding, and similarity-based identity recognition.
- Integrated with a Laravel backend via REST APIs; engineered IN/OUT detection and automated working-hours computation.

Car Information Website with AI Chatbot (React.js, LLM, RAG)
- Built a car information platform with an LLM-based chatbot using a RAG pipeline to answer queries on price, mileage, and specifications.
- Developed an interactive UI for browsing car models with real-time chatbot assistance.

PROFESSIONAL EXPERIENCE

Software Developer & Team Lead | Bpract Software Solutions LLP *March 2023 – Present*
- Led a development team and owned delivery of backend features for client applications.
- Developed RESTful APIs using PHP and Laravel, and integrated third-party APIs.
- Designed and optimized SQL queries to improve application performance.
- Built scalable backend systems with authentication and authorization.

Data Science Intern | Luminar Technolab *July 2025 – March 2026*
- Developed LLM-powered applications using RAG, Ollama, ChromaDB, and Sentence Transformers.
- Built regression and classification models with Scikit-learn, and CNN models for image classification.
- Implemented an NLP-based spam detection system.
- Performed EDA with Pandas and NumPy; evaluated and optimized models using validation techniques.

EDUCATION

Bachelor of Computer Applications (BCA) | University of Calicut, Calicut, India *2020 – 2023*

TRAINING AND CERTIFICATIONS

Python Data Science with ML, AI & Power BI | Luminar Technolab, Ernakulam *July 2025 – March 2026*
Hands-on training in Python, Machine Learning, and Deep Learning with real-world project implementation.
